M/A-COM

# Surface Mount Hyperabrupt Varactors

#### Features

- Surface Mount Packages
- High Quality Factor
- Capacitance Ratio to 9.5:1
- Tape and Reel Packaging Available
- SPC Monitored Ion Implantation for Excellent C-V Repeatability
- Singles and Common Cathode Pairs

#### Description

M/A-COM's MA4ST400 series are ion-implanted, hyperabrupt junction, silicon tuning varactors in the SOT-23 surface mount package. These thermal oxide passivated diodes feature high capacitance ratio and quality factor. They are well suited for octave bandwidth tuning in the HF to UHF frequency bands. The standard capacitance tolerance is  $\pm$  10%, with tighter tolerances available. Capacitance matching at one or more bias voltages is also available.

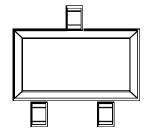

## Applications

The MA4ST400 series tuning varactors are useful for octave bandwidth tuning applications in the HF through UHF ranges. Applications include VCOs and voltage tuned filters in radios, cable TV tuners and test instruments where low cost and excellent lot-to-lot repeatability are critical. Linear tuning performance is available from 3 to 8 volts.

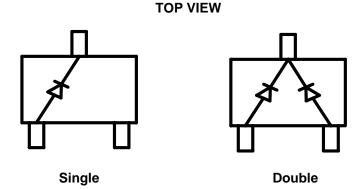

### **Ordering Information**

The model number indicated is for a single varactor. When ordering diodes in common cathode pairs add suffix "CK." For example, MA4ST401CK specifies model number MA4ST401 in common cathode pairs. To order parts on tape and reel add suffix "T" to the end of the part number. i.e., MA4ST401CK-T.

# Configurations

#### Absolute Maximum Rating @ 25°C

<b>.</b>			
Parameter	Absolute Maximum		
Reverse Voltage	22 Volts		
Forward Current	50 mA		
Total Power Dissipation <sup>1</sup>	250 mW		
Junction Operating Temp.	-55°C to +125°C		
Storage Temperature	-55°C to +125°C		

1. At 25°C case temperature. Derate linearly to zero at 150°C.
